WHAT IS CLAIMED IS:

- 1. A method for making a carbon fabric comprising the steps of:
- (a) preparing a raw fabric obtained from raw fibers by weaving; and
- 5 (b) carbonizing said raw fabric into a carbon fabric;

wherein the raw fibers for the raw fabric are oxidized fibers of polypropylene having a carbon content of 50 wt% at least, an oxygen content of 4 wt% at least, and a limiting oxygen index (LOI) of 35% at least.

- 2. The method as claimed in claim 1, wherein the carbon content of said raw fibers is over 55wt%.
 - 3. The method as claimed in claim1, wherein the oxygen content of said raw fabrics is over 8wt%.

15

- 4. The method as claimed in claim 1, wherein the oxygen limiting index of said raw fibers is over 50%.
- 5. The method as claimed in claim 1, wherein said step (b) carbonizing said raw fabric into a carbon fabric is performed at 700-2500°C.
 - 6. The method as claimed in claim 5, wherein said step (b) is performed at 900-2500°C.
- 7. The method as claimed in claim 1, wherein said step (b) carbonizing said

raw fabric into a carbon fabric is performed in at least one high temperature oven under the presence of an inert gas.

- 8. The method as claimed in claim 7, wherein said step (b) is performed in a plurality of said high temperature ovens connected in series.
 - 9. The method as claimed in claim 7, wherein said inert gas is helium.
- 10. The method as claimed in claim 1, wherein said step (b) carbonizing said
 10 raw fabric into a carbon fabric is performed at a predetermined constant temperature.
 - 11. The method as claimed in claim 1, wherein said step (b) carbonizing said raw fabric into a carbon fabric is performed continuously at different temperatures.
- 12. The method as claimed in claim 1, wherein said step (b) carbonizing said raw fabric into a carbon fabric is performed interruptedly at different temperatures.
 - 13. The method as claimed in claim 1, wherein said step (b) carbonizing said raw fabric into a carbon fabric is performed for 2-240 minutes.
 - 14. The method as claimed in claim 13, wherein said step (b) is performed for 10-100 minutes.

20

15. The method as claimed in claim 1, wherein a shrinkage of swid raw fabricduring said step (b) is below 30%.

16. A carbon fabric formed of oxidized fibers of polypropylene, having a density over 1.68 g/ml and a magnetic wave shielding efficiency over 30dB subject to a magnetic wave having a frequency ranging from 300 MHz to 2.45 GHz.

5

- 17. The carbon fabric as claimed in claim 16, wherein said oxidized fibers of polypropylene have a carbon content of 50wt% at least, an oxygen content of 4wt% at least, and a limiting oxygen index of 35% at least.
- 18. The carbon fabric as claimed in claim 16, having a carbon content over 70 wt%.
